Subject Matter

Business Case: Inflation Indexed bond

Question

How should transactions on “inflation indexed bonds” be reported under RTS 22?

ESMA Answer

03-04-2017

[ESMA 70-1861941480-56 MiFIR data reporting Q&A, Q&A 10.1]

Example of transaction report on “inflation indexed bonds”:

An investment firm acquires a DBRI 0.1% 04/15/2026 (ISIN Code DE0001030567) by trading over the counter at 110.00%. The nominal value of the transaction is 1000000 EUR.

The net amount for this transaction is 1111274.01 EUR.

Considering that for the purpose of this example:

The static characteristics (as defined upon the issue of the financial instrument) are:

- Maturity Date: April 15th 2026
- Coupon frequency: Annual
- Day Count Convention: ACT/ACT
- Day to Settle Convention: 2 business days after the trade date

The variables (dynamic characteristics depending on the market conditions) are:

- Trade Date: July 25th 2016
- Settlement Date: July 27th 2016 (as per the Day to Settle Convention)
- Last Coupon Date: April 15th 2016
- Next Coupon Date: April 15th 2017
- Accrued number of days: 103 (i.e., the number of days between the Last Coupon Date and the Settlement Date)
- Period basis: 365 (i.e., the total number of days between the Last Coupon Date and the Next Coupon Date)
- Quantity: 1000000 (i.e., the nominal or monetary value of the transaction)
- Clean price: 110.00
- Index ratio: 1.009990
- Accrued interest: 0.02821918 (i.e., $Nominal\ Coupon / Annual\ Coupon\ Frequency \times Accrued\ Number\ of\ Days / Period\ basis = 0.1/1 \times 103/365$)

The net amount will be calculated as follows (pursuant to the formula provided in field 35 of RTS 22):

Net amount[1] = [(Clean price x Nominal value) + (Accrued coupons x Nominal value)] x Index ratio i.e. $[(110/100 \times 1000000 \text{ EUR}) + (0.02821918/100 \times 1000000 \text{ EUR})] \times 1.009990 = 1111274.01 \text{ EUR}$.
