

# EU T+1 Industry Committee

## Summary of Conclusions, Tuesday 29 April 2025

### Technical Workstream updates

- The Chair requested Technical Workstream co-leads to provide an update on their progress. In particular, what recommendations have been agreed so far, and whether any major contentious issues exist.
- TW co-leads reported positive progress towards finalising recommendations by the agreed timeline of 15 May – no major roadblocks have been identified.
- The Chair proposed that as a general principle, the recommendations must be based on current market arrangements as of June 2025 – if there are major structural changes subsequently, the recommendations will need to be reviewed.
- It was agreed that a standardised format for the workstream recommendations will be developed.
- It was agreed that a public event will be held to support the publication of the Industry Roadmap.
- A dedicated session of the Operational Timetable coordination group took place immediately following the Committee meeting.
