1 Introduction

1.1 Purpose and intended audience of this document

1. The purpose of this document is to provide details on the files containing double volume cap calculation results that ESMA will be publishing, how to access them, and how to use them.
2. The intended audience are the EU market participants and National Competent Authorities that need to make use of the results of double volume cap calculations for the purpose of MiFIR.

1.2 Scope

3. The scope of this document is the files published on ESMA website and containing double volume cap calculations results.

1.3 Abbreviations

Acronym	Definition
RM	Regulated Market
MTF	Multilateral Trading Facility

2 Description of the double volume cap calculation results files generated by the system

4. The system makes double volume cap calculation results available in the form of machine-readable file, on each day when at least one double volume cap calculation result needs to be published.
5. Files are generated potentially every day:
 - a. The main publications are expected on the fifth ESMA working day following the end of each month and on the fifth ESMA working day following the 15th day of each month;
 - b. On any other day, when applicable, publication of calculations for which data was received late, or updates to calculations already published.
6. Double volume cap calculation results files contain, for each ISIN:
 - a. The 12-month period to which the record relates¹;
 - b. The total volume of trading across EU, and associated currency²;
 - c. The percentage of trading under waivers across EU³;
 - d. The percentage of trading under waivers broken down by trading venue⁴;
 - e. Disclaimer information, when applicable.
7. The file generated on a given day contains only results that need to be published on that day.

3 Use of the double volume cap calculation results files generated by the system

8. In order to have the full history of results, download all files, and register their content in ascending date order.
9. In case of corrections, calculation results for the same (ISIN, 12-month period) may be published several times. For a given (ISIN, 12-month period), the result published in the latest file supersede results previously published for the same (ISIN, 12-month period).

4 Instructions to download double volume cap results files from ESMA website

4.1 Timing of generation

10. The files published by ESMA on its website are generated at the end of the day on a daily basis, except when no calculation results need to be published.

4.2 XML Format

11. The calculation results files produced by the double volume cap system are structured as follows:
 - a. Encapsulation of a Business Application Header (BAH), and a Payload as per XML Schema head.003.001.01.xsd
 - b. The Business Application Header is generated as per XML Schema head.001.001.01_ESMAUG_1.0.0.xsd
 - c. The payload is generated as per XML Schema auth.053.001.01_ESMAUG_DVCRES_1.2.0.xsd
12. Link to XML Schema: https://www.esma.europa.eu/sites/default/files/library/esma65-11-1197_annex_dvcap_xml_schema_1.2.0.zip

4.3 File naming conventions

13. The files follow the following naming convention:

DVCRES_<Date>.zip

Where:

<Date> =YYYYMMDD

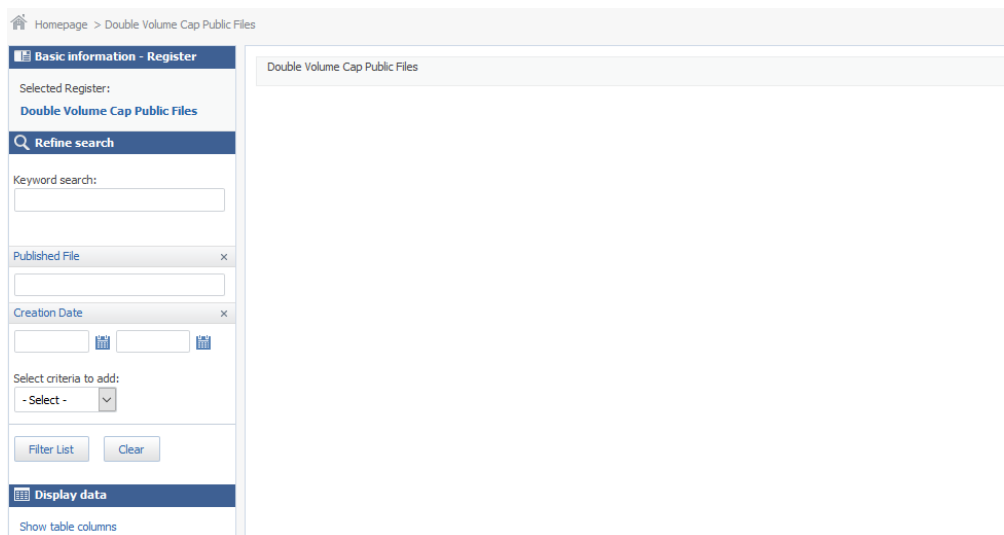

Examples:

DVCRES_20170907.zip

4.4 Access to the files published (human interface)

14. Go to <https://registers.esma.europa.eu/publication/> select register “Double Volume Cap” and click on “Double Volume Cap Published Files”; or go directly to

https://registers.esma.europa.eu/publication/searchRegister?core=esma_registers_dvcap_file

Homepage > Double Volume Cap Public Files

16. Click on the Download Link for any of the files returned, in order to download the corresponding file.

4.5 Access to the files published (machine-to-machine interface)

17. To support automated download of the files, it is possible to list the files published on a specific date by sending an HTTP request.

18. The following HTTP request will return the list of the files published by ESMA on 08 September 2017

https://registers.esma.europa.eu/solr/esma_registers_dvcap_files/select?q=*fq=creation_date:%5B2017-09-08T00:00:00Z+TO+2017-09-08T23:59:59Z%5D&wt=xml&indent=true&start=0&rows=100

19. The below table explains each aspect of the above query so that it can be modified as required to meet necessary usage requirements

Query component	Description
q=*	This is the general query part of the request and tells the response to return all columns for a given result if one exists
fq=creation_date:%5B2017-09-08T00:00:00Z+TO+2017-09-08T23:59:59Z%5D	fq means the filtered query and supports restricting the data that is being search for. For the filtered query here, we are restricting by date – note both the latest date and earliest date are present and follow the ISO date format. Change the date to look for files from a different day or range of days
wt=xml	Response type e.g. xml, json
indent=true	Not necessary but assists to make the output more readable
start=0	The result to start outputting from. 0 works best but any number can be here and corresponds to which set of records to start outputting from
rows=100	The number of results to return. Default is 10

20. The combination of start and row is used to assist cycling over the results when multiple results are returned e.g. more than 100. To read a secondary list (100+) change start to 100 and leave rows as 100. The number of records that the query returns is given by attributes of the resultsFound list.

21. The response is an XML document. The URL to the files are located under the following XPath:

`/response/result/doc/str[@name='download_link']`
